437-872-6249

Richmond Hill, ON, Canada

Senior frontend developer with over 15 years of experience building accessible web and mobile Angular apps

Work Experience

Software Engineering - Sr. Engineer, FICO - Toronto, ON

May 2026 - present

- Leading the design of an error messaging framework for FICO's frontend applications, establishing conventions in partnership with technical publications, product, and QA to standardize how errors are surfaced to users
- Tackle the platform's most complex technical problems, freeing the broader team to focus on feature delivery
- Drive team enablement through deeper mentorship, architectural guidance, and unblocking engineers on hard technical decisions

Software Engineering - Lead Engineer, FICO - Toronto, ON

Nov 2024 - May 2026

- Core contributor on a greenfield fraud detection platform built on modern Nx/Angular architecture, including 5 microfrontends, signals, and a backend-for-frontend layer
- Translate ambiguous, cross-team requirements into shippable features by driving clarification across design, backend, and architecture stakeholders, reducing rework and scope churn
- Partner with product and engineering leadership in an agile scrum environment to prioritize technical initiatives, balancing tradeoffs to keep deliverables aligned with business outcomes
- Own architecture compliance across the fraud platform, reviewing design documents and enforcing new architectural principles to prevent technical debt at scale
- Mentor 3 junior engineers through onboarding, code review, and day-to-day development practices
- Integrate AI tools (including Claude Code) into daily engineering workflows, from rapid prototyping to production code, while critically evaluating where they accelerate delivery versus where they fall short

Senior Software Engineer, Cisco Systems Canada - Toronto, ON

Aug 2021 - Oct 2024

- Delivered a secure, greenfield mobile app using Ionic, Angular, and NgRx component state management, handling the loading and display of thousands of user assets
- Controlled legacy vs. new feature rollout in production using Split feature flags during major refactors, reducing release risk
- Partnered with designers and copywriters in Figma to build reusable components meeting WCAG 2.x Level AA accessibility standards
- Consumed backend data via RESTful APIs using RxJS, working closely with API teams to shape contracts
- Enforced code quality through daily peer reviews on GitHub, ensuring TypeScript code met industry standards and test coverage requirements
- Facilitated weekly Agile refinement ceremonies to align the team on upcoming user stories
- Migrated the monorepo to Nx libraries, improving build times and enabling code reuse across the codebase
- Resolved cross-team build and workflow issues in CircleCI and GitHub Actions
- Authored accessibility training material presented to the broader developer organization

Software Developer, Rangle.io - Toronto, ON

Sep 2019 - Jul 2021

- Wrote well designed, optimized, code for Angular enterprise applications using NgRX global state management

- Developed custom components for React applications and helped streamline the marketing team's content creation via Contentful headless CMS
- Maintained and developed Angular design system components, using Storybook for component documentation and visual testing
- Worked with various clients and stakeholders in the planning, grooming and development of user stories
- Performed unit, integration and end-to-end testing with Cypress and Jest for new features that were developed
- Managed individual project priorities, deadlines and deliverables
- Collaborated with Design and development teams to ensure that components were adhering to WCAG accessibility requirements

Senior Software Developer, Saatchi & Saatchi Canada - Toronto, ON 2014 - 2019

Software Developer, TPM Communications - Toronto, ON 2011 - 2014

- Implemented a complete refresh of Toyota.ca, a website that receives millions of yearly views and helped develop a responsive and adaptive mobile-friendly version
- Taught myself Angular 7 and Laravel PHP, and built an lead-generating Accessibility-validation website deployed on AWS
- Built an accessibility checker tool in Java, leveraging Selenium, Deque aXe plugin, shell script and deployed to AWS EC2 instance to enable remote execution and generate PDF reports for clients
- Developed standards-compliant and usable websites with Angular and frameworks and contributed to site documentation
- Became the subject matter expert on AODA and ensured that websites met the required WCAG 2.0 Level A and Level AA compliance
- Performed ongoing site maintenance to Lexus.ca and debugged frontend, backend, and any cross-browser compatibility issues

Skills

Languages Typescript, HTML5, CSS, SASS, Javascript, Bash

Technologies Angular, Git, Nx, RxJS, NgRx, Claude Code, Cypress, Jest, Vitest, Playwright
Node.js, Tailwind

Other Jira, Confluence, Ionic, Capacitor, WCAG 2.x accessibility standards

Education

University of Toronto - Honours Bachelor of Science in Computer Science 2011

Awards/Community

Active volunteer/foster with multiple Toronto-area cat rescues March 2023 - Present

Cisco - AppCore Culture Committee founding member 2021 - 2024

Ioniconf - Speaker, presented on Ionic, Angular and NgRX ComponentStore 2022

Interests

Home improvement, reading, coding, painting, hiking, daytripping
